- Advertising is a business. It is for all business. To a manufacturer, advertising is usually considered part of a firm's marketing programme. To a retailer, it is also part of his so called 'marketing mix'. To various media of communication, it is both a major source of revenue and a means of providing information about products and services to their audiences. It informs the people about the varieties of service provided by an organization and also about the different products. To the consumer, it is a major source of information regarding products and services. Good advertising is also a means of educating the public in good taste. It moulds the psychology of the consumer and brings him to the point-of-sale. In a country like India where people, specially in the rural areas have acquired a certain amount of purchasing power but are at the same time steeped in superstition and blind beliefs, advertising has a big role to play in changing conventional habits. It should help to educate and motivate the masses so that the little surplus that they have is not frittered away in traditional but wasteful expenditure, but is used in the purchase of goods and services which will help to make their lives richer and at the same time participate in the government's effort for the growth of the company.
